

Method Full Blown Edition

Install and customize industry-specific apps, or create your own. Includes all the features of Method Remote Entry and Method CRM editions plus the ability to install and customize apps from the Method Application Library, as well as the ability to create your own.

Features include

- **Bi-directional real-time sync with QuickBooks®** eliminates setup time and ongoing double entry.
- **Access your Method and QuickBooks® data online** from anywhere in the world, anytime of day. It is even optimized for your mobile phone, including Windows Mobile, iPhone and Android.
- **Access virtually all QuickBooks® lists online.** A web based version of this data comes standard in Method, and all changes sync with QuickBooks® in real-time.
- **Full CRM** is included to track and close sales opportunities, turn leads into QuickBooks® customers, assign tasks and follow-ups to staff, track activities with vendors, and more.
- **Import Method-branded industry apps for free,** such as Method Field Services for scheduling and invoicing service routes, and Method Warehouse for managing inventory.
- **Fully customizable screens, tables, fields, reports and entire Method interface,** means you can tailor it into *your own perfect solution.*
- **Create your own screens, database fields and buttons.** Customize existing screens, or create new screens from scratch, and add your own database fields, such as text, date and dropdown lists. You can even configure buttons on your screens to further improve business processes.
- **Design your own reports, charts and graphs** using the built-in report designer, to identify your company's strengths and weaknesses at a glance.
- **Customer portals** provide a self-service "My Account" area on your website for customers to login to view history, request services and make payments.
- **Customize third party portals** for vendors and partners to independently access information, such as inventory counts, through their own "My Account" on your website.
- **Create your own mobile app** for use on your mobile phone, by customizing and publishing screens in "mobile mode".
